

Fellowship position Lab Maria Pennuto

We are seeking for a talented fellow to join our team to conduct research in age-related diseases (cancer and neurodegenerative diseases). Preferred, but not required expertise in molecular biology, biochemistry, cell culture techniques and in vivo systems. As part of the team, the candidate will design, conduct and analyze experiments and experimental data, develop new ideas that promote current research, prepare and publish scientific manuscripts under direction of principal investigator, teach techniques to others, and may be responsible for the operation of specific equipment. The candidate is also expected to bring new expertise to the team's current research program. Qualified candidates should be able to work independently as well as in a group environment. This position offers an excellent opportunity to learn and apply skills in genetics, molecular biology, biochemistry, gene therapies, use of **AAV and CRISPR/Cas9** genome editing, in vitro and in vivo, and **single cell RNA seq**. Interested candidates should send their CV, a cover letter, and contact information for references.

Position is available from October 2020
